

Sample Word Document or Email Draft

The following examples show how you might copy links from a HyperScope bookmark icon or purple number into something you are drafting or tracking. For instructions on this see the HyperScope Tutorial – Bookmarks section.

Example 1 – For Writing

Hi there! This is a sample document to show how Microsoft Word documents can point to HyperScope pages.

Let's imagine that I am discussing the [HyperScope design document](#). I might suggest that you begin at the [overview](#) of the design document. There is a detailed [client](#) and [server](#) area of the document, as well as [info on the file format](#) we are using.

Example 2 – For Commentary

In the following you can see how you might compose an email replying to a document or article, where you can quickly paste in links to the specific sections or paragraphs you are giving feedback on, with whatever viewspecs you think would be most helpful to your recipients. You can embed the links behind the text if you prefer (as in Example 1) or just paste the link as below.

Design Feedback (rev 1.0)

Here's my feedback on the latest **HyperScope Architectural Design** document:

<http://hyperscope.org/hyperscope/src/demos/hyarch.opml>

1. Re: Resolving the address

<http://hyperscope.org/hyperscope/src/demos/hyarch.opml#4C1A2>

Yes, I vote for fully reloading the page, but you might also want to consider reloading just the affected nodes. You might want to also take a fresh look at Engelbart's intention in his OHS article <http://hyperscope.org/hyperscope/src/demos/augment-132082.opml#077:wm>

2. etc.
-

Example 3 – My Custom Bookmarks File

Here's how you might start your own custom bookmarks file in your editor.

- Engelbart's [ESSENTIAL ELEMENTS OF AN OHS](#) basic list of features
- Engelbart's [Four General Groupware Architectural Requirements](#) as applies to groupware
- Etc.
